

Pranay Kale
Software Engineer | 2+ Years of Experience
Backend Developer | Core Java | Java Spring Boot
Email:pranaykale06@gmail.com | Mob:[9923155738](tel:9923155738) | [linkedin.com/in/pranay-kale-1a89a6293](https://www.linkedin.com/in/pranay-kale-1a89a6293)
Software Engineer specialisation in Java development and having good hands-on experience in writing API in Java .

Professional Summary
Java Backend Developer with 2.1 years of experience in designing, developing, and deploying scalable backend applications using Java, Spring Boot, and RESTful APIs. Strong expertise in building secure, high-performance services, implementing business logic, and integrating databases such as MySQL, Oracle, and Redis. Hands-on experience with multithreading, performance optimization, and server deployment using Apache Tomcat and HAProxy. Skilled in CI/CD pipelines with Jenkins, Agile development practices, and cross-functional collaboration. Recognized for delivering reliable backend solutions, improving system scalability, and enhancing application stability in production environments.

Technical Skills

Backend	Java, Spring Boot,
Databases	PostgreSQL, MySQL ,Redis ,MongoDB
Tools & DevOps	Git, Jenkins, Swagger, MySQL, Oracle, Redis, Apache Tomcat, HAProxy, Log4j2, Shell Scripting, Crontab, JIRA, Confluence, Agile/Scrum
Generative AI	Copilot, Cursor, Windsurf ,ChatGPT

Professional Experience
Software Engineer
Route mobile ltd (Proximus Global) | 03/2024 – Current.
Responsibilities:

- Developed and maintained high-performance Java backend applications for enterprise and government clients including LIC, KSA, Bangladesh and ICICI.
- Designed and implemented scalable backend architectures using Core Java, Spring Core, Spring Boot, Hibernate, and Servlets.
- Built and supported standalone processing applications such asRcsJioSubmitter, RevokeJioApp, Mail Alert, BTRC DLR, and SmsPlus, QueueProcessor ensuring reliable message handling and data flow.
- Integrated MySQL, Oracle, and Redis to enable efficient data storage, caching, and low-latency data access.
- Implemented secure message communication using public-private key encryption, supporting PEM and CER key formats to ensure data integrity

- Deployed, configured, and managed applications on live production servers using Apache Tomcat and HAProxy, achieving high availability and effective load balancing.
- Performed production troubleshooting, debugging, and root-cause analysis, significantly reducing downtime and improving system stability.
- Automated routine backend tasks using Shell scripting and Crontab, improving operational efficiency and reliability.

Key Projects

RcsJioSubmitter (RCS Messaging Platform – Jio)

Tech Stack: Java, Spring Boot, REST APIs, Redis, MySQL, Apache Tomcat, HAProxy (load balancing)

Responsibilities:

- Designed and developed a high-throughput, API-based backend application handling 5–6 million requests per day for RCS message submission.
- Implemented Redis as a primary fast-access datastore and caching layer, with MySQL as a persistent database, ensuring low latency and data reliability.
- Built a robust fallback mechanism to automatically route requests during failures, improving system resilience and availability.
- Optimized API performance through efficient request processing, connection pooling, and multithreading, supporting large-scale concurrent traffic.
- Ensured fault tolerance and high availability through proper error handling, retries, and backend service monitoring.
- Collaborated with cross-functional teams to deploy, test, and maintain production-ready services in a live telecom environment.

BulkSMS API (Enterprise Messaging Platform)

Tech Stack: Java, Spring Boot, REST APIs, MySQL, Redis, Apache Tomcat

Responsibilities:

- Designed and developed a **high-performance REST API** for **bulk SMS submission**, enabling message delivery to telecom operators such as **Jio, VI, BSNL, and Airtel**.
- Implemented an **optimized application startup process** that **preloads required configuration and reference data from MySQL**, reducing database calls during runtime.
- Processed incoming API requests by **validating request parameters**, applying **business rules**, and performing **real-time credit deduction** for users.
- Integrated with the **SmsRouter API** to dynamically **construct operator-specific URLs** based on routing logic and message attributes.
- Forwarded validated requests to the **Box application**, which handled downstream message delivery to respective telecom operators.
- Ensured **high throughput, low latency, and reliability** through efficient request handling and backend optimization.

Achievements

- RcsTeam Award – Recognized for contributions to the RcsJioSubmitter project.
- Consistently rated as a top performer in annual reviews.

Strengths

- **Backend Development Expertise** – Strong hands-on experience building scalable applications using [React.js](#), HTML, CSS, Core JAVA, Spring boot
- **Performance Optimization & Problem-Solving** – Proven ability to reduce load times by up to 40%, optimize components, and improve performance.

Education

- **PG-Diploma in Advanced Computing** – MET-IIT, Mumbai (2024).
- **B.E.** – Zeal College of Engineering and Research, Pune

Personal Details

- **Date of Birth:** 18/12/1995
- **Current Address:** Lower Parel, Mumbai
- **Languages:** English, Hindi, Marathi
